- 1- New Year Day
- 3- Art with Janet on Willow
- 9- Birthday Party
- 15- Martin Luther King Jr. Day

18- Evergreen and Hickory Bowling Trip

- 19- Matt Price on Willow
- 25- Redwood Bowling Trip

#### **Worship Services**

Worship Service Every Sunday w/ Pastor Kim 2:30 - HC/ch957

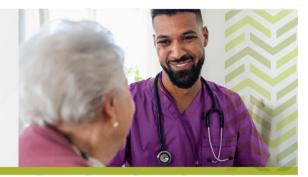

#### Roman Calendar

December was one of the original months in the ancient Roman calendar, which was in use from around 750 BC until 45 BC. In this original Roman calendar, December was the tenth month. This placement makes a lot more sense for December, as this month's name translates into "tenth month." When Julius Caesar changed the calendar in 45 BC to the Julian calendar, he added two months, January, and February, which were inserted at the beginning of the calendar year. These changes have forever cursed December to be a month with the wrong name.

# Fitness Tips:

**Dehydration** is a potentially serious condition that can occur when you don't consume enough fluids for your body's needs. This can lead to health complications ranging from mild to life-threatening, such as urinary tract infections (UTIs), heat stroke, heart problems, kidney failure, and blood clot complications. Since dehydration affects the health of your cells, it can also lower your body's ability to ward off infections and heal from injury or illness.

As you get older, it's even more important to stay hydrated. A study from the University of California, Los Angeles School of Nursing found that up to 40% of elderly people may be chronically underhydrated.

Early dehydration symptoms include:

Dark-colored urine, urinating less frequently

- Dizziness
- · Headaches
- · Muscle cramps in arms or legs
- Confusion, decreased cognitive function

The tiredness and lack of coordination that may result from dehydration can also lead to falls and injury. The best way to prevent dehydration is the simplest: drink more water throughout the day.

Generally, you should take one-third of your body weight and drink that number of ounces in fluids. For example, if you weigh 150 pounds, aim to drink 50 ounces of water each day.

However, it's best to talk to your doctor to determine how much water you should be drinking daily. They can review your medical history with you as well as any over the counter or prescription medications you're currently taking. Certain medications cause the body to flush out more water. And some medical conditions, such as cystic fibrosis, also make people more prone to dehydration.

Choose foods with high water content.

Keep water with you, always.

Build hydration into your routine.

If you're looking for additional tips on how to stay hydrated, ask your healthcare provider. Getting enough water each day is an easy yet vitally important way to stay healthy and active as an older adult.
